We are working on a website which serves a small community of users. We are planning to enhance the features of the website by using .NET Framework 4.5. Our plan is to use some of the features and functionality which are specific to .NET Framework 4.5. However, I have heard that .NET Framework 4.5 is not fully supported on Windows 8. If we do so, we will have to remove that functionality for our Windows 8 users as well. We don't want to maintain two versions of the site (one for .NET Framework 4.0 and another for .NET Framework 4.5). We can do without .NET Framework 4.5 support if we have to. But I am afraid that .NET Framework 4.5 will be fully supported on Windows 8 if it really proves a success. Also, I want to know if it is possible to use .NET Framework 4.5 on Windows 8. Is it possible to use .NET Framework 4.5 on a Windows 8? Or will it mean that we have to remove that functionality for Windows 8 users? A: The simple answer is that you cannot. This MSDN blog post by Stephen Toub highlights the issues of backwards compatibility and what you can and can't do with .NET 4.5. If you need to support Windows 8, you need to make sure you can at least support the functionality that 82157476af
